more info

The Markoprint X4JET plus Touch is a 5.7" high-resolution TFT color touchscreen display and controller. The X4JET is used to communicate to a printhead that does not have its own intelligence as well as visualize print jobs and statuses of certain Markoprint printheads that do not have a built-in display. This unit controls a wide array of printheads and head configurations that can adapt to almost any application. It supports four different print technologies: HP, LX, XR & MX Class.

The X4JET can operate up to 4 printheads of the same or different print technologies simultaneously, giving you the options to print on two different sides of a package, two different production lines, as well as the ability to stack printheads to get a larger print height.

Two configuration options are available depending on the application requirements that allow for printing alphanumeric text, 1D & 2D barcodes, graphics, live date, time, sequential numbers & print speed.

High resolution codes at fast speeds with excellent adhesion on plastic, glass, metal, as well as other porous and non-porous substrates.

Simultaneously print essential information while ensuring legibility with this high-resolution unit.

## ADVANTAGES

- » 5.7 touchscreen and keypad for easy operation
- » Messages are created with the included Software
- » Create messages directly from the touchscreen controller
- » Control up to 4 print heads
- » Mix print technologies. Run up to 4 supported print technologies simultaneously
- » Data selection via USB, network connections, or EIA-232
